EXPERIENCE

Product Manager I, Rider Experience · *MOIA (Remote)* Dec 2025 – Nov 2026

- Tracked the rider journey from booking to repeat ride in QuickSight for a mobility-as-a-service app, adding a **churn-risk model in Python** that scored each rider's likelihood to leave from ride frequency, wait times, and unfilled requests; the scores pointed the team to **unfilled requests as the single biggest retention leak**
- Built a **churn-rate dashboard** with Claude Code (HTML, SQL via MCP) that replaced **six team spreadsheets with one source**, giving each team its own view, such as churn by district or riders most likely to leave
- Identified recently underserved riders (e.g., unfilled request, late pickup) via SQL for lifecycle marketing's recovery campaign, then set up automated apology emails with a ride credit within 24 hours; **18% of 48,000 targeted riders rebooked** within 30 days versus 13% in the control group, **about 2,400 additional riders rebooked**
- Worked on a redesign of the "no car available" screen to offer alternatives instead, using Claude Code with the **Canva MCP server** for quick concept mockups and the **Figma MCP server** to turn final frames into code-ready components; **riders accepted an alternative on 28% of 50,000 unfilled requests**
- Ran an **eight-week 20% midday discount test** with marketing to free up rush-hour cars, using SQL to target riders whose trip history showed flexible schedules; **midday rides rose 9%** versus the control group and **unfilled rush-hour requests fell 6%**, leading marketing to roll the offer out citywide
- Wrote a **searchable data dictionary for 60+ rider tables**, each with plain-language definitions, a dependency map, and a tested SQL query, organized by journey stage (booking, ride, repeat); the ready-made queries **unified metrics across team dashboards**, replacing ad-hoc code that had caused reporting errors
- Simplified the first-ride onboarding flow in Figma **from six screens to four** by saving payment up front, and added a first-ride credit; after launch, the share of new users who completed a first ride within seven days rose **from 38% to 46%**, tracked step by step in SQL

Global Private Bank Analyst (Asset & Wealth Management) · *J.P. Morgan* Jul 2025 – Dec 2025

- **Cut proposal prep from 3 days to 2** with an **Excel Monte Carlo template** projecting each client's risk profile and exposure to market shocks; bankers used it to walk **35+ ultra-high-net-worth families** through trade-offs
- Analyzed **held-away assets across 60 client families** in Excel, comparing KYC-declared net worth with J.P. Morgan balances to rank the largest gaps; the list gave bankers their **top 10 consolidation targets** for the quarter
- Prepared **KYC files for 6 new global families**, tracing source of wealth through holding companies and trusts across several countries; **all 6 were onboarded, bringing in $400M in new assets**
- Answered clients' written questions during market swings, drafting **talking points for bankers' calls** using **Bloomberg Terminal** data (WIRP rate-cut odds, ECO calendar, GC yield curves) paired with J.P. Morgan's views
- Helped investors with **FX conversions and cross-border transfers**, pulling live exchange rates and prepared trades with amount, currency pair, and settlement date; assisted **on ~$50M in conversions across 12 families**
- Built a **currency exposure report** covering 20 families' holdings by currency, flagging large non-USD to hedge against dollar swings; investors used it to recommend **forward hedges to 5 of them, covering about $120M**

Summer Global Private Bank Analyst (Asset & Wealth Management) · *J.P. Morgan* May 2024 – Aug 2024

- Co-built an **AI prospect-research app** with interns and analysts on the ChatGPT API: bankers enter a name and any known details, and it searches and scrapes Google, LinkedIn, Reddit, and social platforms into one profile; owned the API integration and **source-verification layer** keeping results accurate and cited, and the summer-long project **won 1st of 12 eight-person teams**, presented at the J.P. Morgan morning meeting
- Built a **branch-referral tracker in Python, Excel, and VBA** for high-net-worth U.S. and international clients who walk into Chase branches in Austin, Miami, Nashville, Los Angeles, and Chicago, logging transfers by branch, outreach, and materials supplied; it connected Private Bank bankers with Chase regional directors for a smoother client journey, brought in 2 new clients during the internship, and stayed in use after it ended

EDUCATION

BBA, Business Analytics (STEM), Minor in Finance · *Hofstra University* May 2025

- GPA **4.0 (major) / 3.98 (cumulative)**; Honors College, Degree with Distinction; **Presidential Scholarship**; Best Paper, Journal of International Business & Law, "Homes for Profit" on housing affordability (2025)

SKILLS

Product: A/B testing, funnel and retention analysis, churn modeling, segmentation, lifecycle campaigns, UX prototyping

Finance: Monte Carlo modeling, KYC and source-of-wealth due diligence, held-away asset analysis, FX hedging

Tools: SQL (Snowflake), Python (pandas, scikit-learn), Excel (advanced modeling, VBA), Airflow, QuickSight, Looker, Power BI, Jira, Figma, Canva, HTML dashboards, Bloomberg Terminal, Git/GitHub

AI: Claude Code, Codex, Claude and ChatGPT API integration, MCP, multi-agent orchestration, prompt engineering
